

PROFESSIONAL SUMMARY

Staff Engineer with 8+ years of experience engineering Java and Spring Boot systems for payment, financial-services and enterprise-integration platforms. Strong in REST API design, microservices, AWS, SQL, CI/CD, performance tuning and production support. Delivered payment-gateway integrations, reconciliation workflows, cloud upgrades and workloads validated at more than 50,000 concurrent users. Lead technical delivery across design, implementation, testing, incident analysis and mentoring.

TECHNICAL SKILLS

Languages	Java 17/21/25, SQL, Python, JavaScript
Backend	Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, REST APIs, OpenAPI
Architecture	Microservices, distributed systems, event-driven architecture, API gateway, service discovery, Resilience4j
Messaging	Apache Kafka, RabbitMQ, AWS SQS, AWS SNS
Data	PostgreSQL, SQL Server, MongoDB, Redis, Flyway
Cloud & delivery	AWS Lambda, Batch, S3, EC2, IAM, CloudWatch, Podman, Docker, Kubernetes, GitHub Actions, Jenkins
Quality & observability	JUnit 5, Mockito, Testcontainers, JMeter, chaos testing, Splunk, Prometheus, Grafana, OpenTelemetry

PROFESSIONAL EXPERIENCE

Staff Engineer

Altimetrik, India

Jul 2024 - Present

- Own backend delivery for Java and Spring Boot payment services covering REST integrations, reconciliation, AWS messaging and storage.
- Integrated a payment gateway that reduced payment failures by 25% and improved transaction reliability.
- Validated workloads above 50,000 concurrent users, identified bottlenecks and improved throughput by 30%.
- Automated reconciliation through AWS Batch and Lambda, restoring 99.9% master-data consistency and reducing processing time by 70%.
- Modernised AWS SDK integrations and enforced IMDSv2 to improve throughput and remove metadata-service exposure.

Senior Developer

SubscribeIT, India

Aug 2021 - May 2024

- Re-engineered a legacy payment-processing platform as Spring Boot microservices and REST APIs, reducing processing time by 30%.
- Led an eight-engineer team delivering an algorithmic financial platform that exceeded previous benchmarks by 15%.
- Migrated critical banking services to AWS-oriented deployment patterns, lowering infrastructure cost by 25% and shortening release cycles by 40%.
- Established GitHub Actions pipelines that increased deployment frequency by 300%.
- Optimised JVM garbage collection, SQL access paths and latency-sensitive code, reducing peak response time by 20%.

PROFESSIONAL EXPERIENCE - CONTINUED

Business Technology Analyst

Feb 2021 - Aug 2021

Deloitte, India

- Delivered Java microservice and REST enhancements while preserving API validation and error-handling standards.
- Created unit and service tests that reached 95% coverage and improved regression protection.
- Used chaos testing and Splunk diagnostics to validate recovery paths and resolve production defects.
- Mentored junior engineers on setup, debugging and testing practices.

Software Engineer

Sep 2018 - Jan 2021

Zerone Consulting, India

- Built enterprise Java backend services, REST/SOAP integrations and data-processing applications.
- Developed Hadoop and AWS EMR processing workflows to improve throughput and reduce storage cost.
- Automated Linux deployment tasks with shell scripting and improved maintainability using modern Java practices.

EDUCATION

Master of Computer Application

Sep 2015 - Dec 2018

Computer Science - Sree Narayana Gurukulam College of Engineering, Ernakulam, Kerala, India

Bachelor of Computer Application

Jun 2012 - Mar 2015

Computer Science - Indira Gandhi College of Arts and Science, Kothamangalam, Kerala, India

SELECTED ENGINEERING FOCUS

- Secure REST API and OAuth2 resource-server design.
- Distributed transactions, idempotency, outbox and reconciliation patterns.
- PostgreSQL query tuning, concurrency control and cursor pagination.
- Kafka-based event processing, retry, deduplication and dead-letter handling.
- Cloud-native delivery with AWS, containers, Kubernetes and observability.
